

RTP Partners

Technology companies can play several roles in the RTP eco-system, including:

- **Third-Party Service Provider (TPSP):** A TPSP provides hosted RTP connectivity to FI Participants. RTP connectivity terminates at the TPSP's data center. An FI Participant can also serve as TPSP for other FI Participants.
- **Channel Provider:** TCH also contracts with some TPSPs (typically core processors) to serve as Channel Providers, to assist in the RTP signup and service of smaller FIs.
- **Gateway Provider:** A Gateway Provider licenses an application that FI Participants use in their data centers to connect to RTP; RTP connectivity terminates at the FI's data center.
- **Testing:** Some companies may develop an RTP simulator, which clients can use to ensure that they are able to exchange messages that are properly formatted based on the RTP specifications.
- **Origination Applications:** Some companies may provide payment solutions designed to originate transactions for specific use cases – e.g., bill pay and treasury management.

Our current RTP partners and service providers include:

- ACI
- Cognizant
- D&H
- Deloitte
- Dovetail
- ECS Fin
- Evertec
- FIS
- Fiserv
- IBM
- Icon
- Intellect Design
- Jack Henry
- Push Payments
- Swift
- Volante Technologies
